Review Monkeys Website

Zense project

K. SIVA HITESH

1. IDEA

People generally try to find the best in everything. From the clothes to health, what not. So, I felt that if people can view/give reviews of the most important organisaions like restaurants,hospitals,institutes at a same place, it would be very helpful to people to find the best in them. That's the reason why I came up this project.

2. TECH STACK

- Flask
- Python3
- MySQL
- HTML,CSS,JS
- MySQL workbench application for database management.

3. FEATURES

1. Register: Person, who wants his/her organisation to be reviewed by people in my website should register first.
2. Login: After registering, they can request the admin to include their organistion name in the review using the request-box in the login page.
3. Admin login: Admin can see all the requests after he logs in and can accept them.
4. View reviews: People can see the reviews of the restaurants,institutes and hospitals. When you go into the individual review place of the organisation, you can select the organisation name of which you want to see the reviews. For hospitals you can select the department also.
5. Write reviews: Write the reviews for the restaurants,institutes and hospitals similar to the way you viewed the reviews.

4. Experience

It was an amazing experience making this project. I got interest to learn the things I don't know because of this project. I learnt the part required of MySQL,flask,Database Management for this project. This bought me interest to make more projects.I faced some issues while making the tables in database,but I managed to solve them. Lot of bugs to solve gave me some experience in debugging .

5. Progress

My project can still be improved. This is just the first version of it. Beautifications can be done to this website, website can be made more responsive and few other things. But, due to time constraint I was unable to complete them.

6. Future Prospects

There are many things I want to implement in the future:

1. Adding forgot password option, indicating the mistake done by the person when they register/login if any.

2. Adding CITY and the branch/sub-area in the city options so that the reviews can be more efficient.

3. View/write reviews of the movies also.
